

Mads Miltersen

Cand. Arch MDD

Mads Miltersen is an innovative designer who comes up with new, functional solutions. He is a designer with a goal to improve existing products by introducing new facets to the design such as cold handles and concealed hinges. Working with Jydepejsen, he has developed our dupic air system, which makes the wood-burning stove much easier to use. It is important to him that the wood-burning stoves are stylish and elegant pieces of furniture and not just a source of heat in the home.

» Wood combustion reduces Denmark's emission of CO₂ with 1.6 million tons annually. This equals 10% of Denmark's commitment according to the Kyoto Treaty. (Source: The Danish Energy Agency)

EOS

EOS, a round, cast-iron wood-burning stove with three glass panels, has both details and finish all the way round. The three glass panels enable you to enjoy the dancing flames and the magical shadows they cast across the living room floor to the full. This stylish and elegant stove really comes into its own when freestanding wall mounted, the pedestal or against a straight wall.
